

cas-spare

cas-spare v2, compared to latest version, offer a better logs management, a SSL handshake allowing to verify CAS server identity. Furthermore a small bug has been corrected and IPv6 support has been optimized.

Only a few things have changed in configuration files : some parameters have been removed and SSL/TLS configuration is now available.

cas-spare v2 is used at Panthéon-Sorbonne university (with 60000 users) since the beginning of March and at the moment everything is all right.

The few CAS breakdowns we have, caused by server reboot, LDAP breakdown or network failure have been corrected by cas-spare V2 with success. Our CAS server perfectly support 50000 connections since 1 Mars 2006.

That's why I hope you'll use cas-spare v2. This tool, very easy to install and configure, is an insurance of peace of mind of system administrators.
